Andres Velasco

Profile

Senior Designer with over 15 years of experience in the fields of Design and Advertising; creating innovative solutions with a strategic approach. A creative problem solver whose strengths lie in branding, campaign execution, and stringent adherence to standards with a goal of understanding a client's problem and meeting their needs with the perfect balance of visual communication through analytics execution.

Andres is an excellent communicator and skillful collaborator who is bilingual in English and Spanish. He can quickly build strong working relationships within an organization and sincerely enjoys partnering and collaborating with business leaders and users to craft innovative solutions to business problems while enhancing the digital experience for all involved.

Highlights

- Delivered a comprehensive design system for one of the largest privately owned companies in the world; created and streamlined internal processes and stakeholder communication
- Led modernization efforts for multiple client applications and websites, improving performance, user experience, and functionality
- Created and maintained a brand identity for one of the largest public health organizations in America
- Designed and managed event materials for a nationwide filmmaking masterclass tour with Saturday Night Live personnel
- Managed and maintained a high-traffic website for a public health organization, reaching 4.7 million residents
- Collaborated with product owners and business analysts to design and launch an online customer portal aligned with business needs and design best practices
- Designed and produced various marketing materials for a resort company, including newsletters, landing pages, and social media content
- Designed for multiple conferences that required overall attendee experience across all touchpoints, from crafting engaging visuals across multiple mediums and layouts to

Experience

Consultant
SDG (Solution Design Group), March 2020 to Present

Partners in Excellence

- Partnered with cross-functional stakeholders to conduct a comprehensive technical assessment and design the future-state framework for a unified, role-aware reporting dashboard spanning clinical, financial, and HR systems.

- Architected user journeys and UX/UI principles for a "cascade of granularity" layout, designing 5 distinct, role-based Power BI dashboard views (Organization, Center, Department, Pod, and Rehabilitation) to reduce user context switching.

- Collaborated closely with technical teams to align complex relational data sources with front-end visualization capabilities and Power BI row-level security (RLS) safeguards.

- Established design system guidelines, UI component structures, and data chart best practices to ensure clear, accessible, and scalable reporting layouts across desktop and mobile form factors.

Holmes Corporation

- Conducted comprehensive heuristic analysis of a learning system and assessments, identifying key design update opportunities to enhance user experience.
- Designed and implemented user-centered improvements to login, product selection, loading screens, main learning product flows, scalable lesson readings, inline definition design, and search/glossary features, resulting in improved usability and engagement of a micro credential experience.
- Developed original icon sets to enhance visual communication and user interface clarity.
- Facilitated workshops to gather stakeholder feedback on the SAGE professional development portal, analyzing user needs and expectations to inform strategic design improvements.
- Identified key improvement themes for SAGE, including personalization, seamless integration, user engagement, and accessibility, and translated these insights into actionable recommendations.
- Advocated for a user-centric approach in SAGE development, addressing stakeholder concerns regarding technical integration and data management.

Health Partners

- Conducted interviews with stakeholders to understand their needs, pain points, and expected workflows, ensuring the application effectively addresses business challenges.

- Designed the data model and user journeys for key tasks, such as contract management, price calculations while optimizing operational efficiency and minimizing manual effort.
- Created mid-fidelity designs to visualize the user interface and gather feedback from stakeholders, enabling early identification and resolution of potential issues and reducing development costs.
- Designed the application to be accessible to all users, adhering to accessibility guidelines, ensuring inclusivity, and minimizing legal risks.
- Worked closely with developers, data analysts, and business stakeholders to ensure the successful implementation of the application, fostering cross-functional collaboration and driving project success.
- Contributed to the development of an application that streamlines workflows, reduces errors, and improves the accuracy of pricing calculations, leading to significant cost savings and increased revenue.

Twin Cities Orthopedics-Revo

- Conducted interviews with internal stakeholders to gain a deeper understanding of their roles within the organization to create a journey map to better understand stakeholders’ part in the current process.
- Workflow workshops were created to understand stakeholders' expected processes. These insights were then used to architect process that encompassed all stakeholders' needs and expectations while highlighted the improvements offered by the new process and tools.
- Collaborated with campaign vendors to identify the best matches for the company's needs, ensuring seamless integration with the intended technical architecture and workflows.
- Developed campaigns and designed engagement workflows to guide partner companies and their employees towards a path of wellness. These programs featured weekly health challenges tailored to individual needs based on initial health assessments, incentivized participation, and fostered the development of sustainable healthy habits.

Twin Cities Orthopedics-Revo
Prioritized disqualifying factors in collaboration with the team to expedite the patient qualification process, including automation of assessment components.

- Automated communication and reminders to patients, eliminating redundancies and resulting in significant cost savings for the organization.
- Re-engineered the application's experience and patterns to seamlessly align with the natural workflow of nurses.
- Captured comprehensive patient data and program outcomes to support program evaluation and improvement.
- Integrated with existing TCO systems to streamline workflows and enhance data accuracy.

Human Powered Health

- Led a modernization effort of an existing application aimed at athletes looking to optimize their training.

- Audited the existing application which included assessing the technology stack, designing the infrastructure limitations, and guiding user behavior.
- Elevated performance, enhanced user experience, and improved scalability through a consistent design pattern.
- Defined the scope, timeline, and resources required for different modernization steps.
- Refreshed the user interface with design best practices within the Material User Interface Framework and responsive layouts for mobile devices.

Component Assembly Systems (CAS)

- Led modernization efforts of an existing website aimed at enhancing user experience, improving functionality, and increasing engagement.
- Evaluated website to identify pain points, strengths, and user needs.
- Set goals and objectives success metrics for the modernized website.
- Researched trends and technologies as well as analyzed industry best practices to identify relevant technologies for modernization.
- Developed project roadmap with milestones and deliverables.
- Led critique and brainstorm sessions with junior designers to push the designs further in a creative fashion while adhering to usability best practices.
- Created low-fidelity wireframes as a visual aid for alignment on the new website's layout and functionality.
- Developed a content strategy and plan for migrating existing content to the new website.
- Chose technologies to develop the new website with a focus on user-friendliness, accessibility, responsiveness, and ease of maintenance.
- Conducted iterative user testing throughout the development process to ensure alignment with client and user needs.
- Performed rigorous testing of the website for functionality, compatibility, and security.

ProAg

- Led a design system build with an understanding of internal systems and information architecture while getting familiarized with processes of internal and external stakeholders that pertained to crop insurance to create a more consolidated and streamlined experience.
- Conducted planning workshops to determine what priorities to tackle
- Interviewed internal stakeholders on ways of working with their current design system and pitched different design system options to better align to IT and PM's expectations and feasibility concerns.
- Organized client's Figma instance as well as created and organized documentation, ceremonies, templates, and educational onboarding material for resources integrating into the company's account.

Cargill

- Partnered with product owner and business analyst to create an online customer portal that aligned business needs with design best practices.

- Helped stand up a white label design system for adoption across the organization globally.
- Co-created a process with developers about a QA relationship and a negotiation process around feasibility of design and translation of design to development.
- Produced documentation, onboarded trained recourses, created ceremonies, and audited global products leveraging the company's white label design system.
- Updated the user experience of the company's website with a Director of Communications and a full-time junior designer.
- Constructed a companywide standard for gathering feedback from its user base.
- Partnered with the global IT group to translate complex application health data into an intuitive Power BI reporting dashboard. A core part of this work was designing role-based visualizations, ensuring that stakeholders from various levels could easily access, understand, and report on the specific data they needed to make informed decisions.
    - I conducted working sessions with internal stakeholders to align user needs and seamlessly create easily digestible information reports, making them useful and relevant for different levels to support their specific decision-making.
    - I had frequent check-ins with developers to ensure my designs were implementable in Power BI.
    - I created documentation of my design choices based on design and data chart utilization best practices.
    - I established a design system that included components to facilitate scaling future designs in a standardized fashion, building upon the documentation I created for the client.

Senior Designer/Web Master
Harris County Public Health, 2015 to 2020

- Developed a brand identity for one of the largest public health organizations in America.
- Collaborated in the designing print and digital collateral for multiple recurring yearly conferences as well as displays and lighting.
- Designed a wide range of materials for print and digital forms the organization and its divisions.
- Managed and maintained the organization's website for distributing information to 4.7 million county residents.
- Tracked the success of websites and created presentations with Google Analytics.
- Developed work processes that include intake and task management between different work groups.
- Technologies used: DotNetNuke, Google Analytics, Adobe Suite, SketchUp, Photography equipment, Videography equipment

Graphic Designer
Raintree Resorts International, 2014 to 2015

- Designed monthly newsletters as a digital magazine that was packaged within an e-mail blast to members.
- Produced e-mail blasts sent out bi-monthly.
- Designed responsive HTML landing pages for resort promotions that tie into Google and Facebook ads for the company and its subsidiaries.
- Designed and monitored Facebook ads and posts.
- Edited resort photos for use on printed and digital materials for internal and external use.
- Designed menus, flyers, and banners for proprietary bars and restaurants.
- Technologies used: Adobe Suite, Wordpress

Graphic Lead
Hudson Trail Outfitters, 2013 to 2014

- Designed store promotions for web and print.
- Coordinated with print shops and organized distribution.
- Created a display standard and created interior design flow of stores to adhere to.
- Data entry of outdoor equipment, clothing images, and product information using Magento.
- Reported on top selling products on the website and gave advice on next steps to innovate user engagement.
- Technologies used: Magento, Adobe Suite

Graphic Designer
Monte Zucker Photographic Education, 2012 to 2013

- Worked with Saturday Night Live personnel to create a masterclass experience that toured around the United States and aimed to educate filmmakers.
- Tailored designs for event sponsors and special requests that they may have with sponsor’s marketing kit.
- Aided the Creative Director in designing event posters, e-mail blasts, websites, website widgets, gif web banners, website maintenance, designing props for film tours, Facebook timeline photo designs for tour events, and Twitter backgrounds.
- Technologies used: Adobe Suite, Photography equipment, Videography equipment
